Connective Tissue Lab exercise 9 - Anatomy & Physiology 245 with Becker at Elgin Community College - StudyBlue Flashcards Connective Tissue Lab exercise 9 - Anatomy & Physiology ... Cells of Connective Tissue Fibroblast Fibroblasts are by far the most common native cell type of connective tissue. The fibroblast synthesizes the collagen and ground substance of the extracellular matrix. These cells make a large amount of protein that they secrete to build the connective tissue layer. Connective Tissue Lab - Yale University Connective tissue is found in all parts of the body as discrete structures or as part of various body organs. It is the most abundant and widely distributed of the tissue types. Connective tissues perform a variety of functions, but they primarily protect, support, and bind together other tissues of the body. Lab Manual - Tissues | Epithelium | Tissue (Biology) View Lab Report - a&p lab 6 from ANATOMY AN 2064 at South Arkansas Community College. Lab Report 11: Integumentary System Part A 1. ...

 Name Date Section ...Questions: A) Which
 type(s) of epithelial cells have a basal
 lamina? Cuboidal, columnar,
 pseudostratified and stratified epithelia
 have basal laminae B) Where are epithelial
 tissues found in the body? Most epithelial
 tissues are essentially large sheets of cells
 covering all the surfaces of the body
 exposed to the outside world and lining
 the outside of organs.
