ALESSANDRA DARIEN

National Fisherman Amberley Publishing Limited
 There is growing interest in the use of Neuro Linguistic Programming (NLP) as a Qualitative Market Research technique. NLP was previously used in psychology to understand how people think and react, and as a tool in self-development, interpersonal skills and business, looking at how our brains think and experience the world. Qualitative Market research experts now see that using NLP can help the researchers understand the human brain and, armed with this power, they can find out the truth from interviewees. *The Hidden Art of Interviewing People* shows how, by using NLP and related techniques in interviews, the market researcher can see beyond the obvious to the truth.
MotorBoating Routledge
 Contains current information on hovercraft and hydrofoils.
Australian Fisheries John Wiley & Sons
 The Routledge Handbook of Motor Control and Motor Learning is the first book to offer a comprehensive survey of neurophysiological, behavioural and biomechanical aspects of motor function. Adopting an integrative approach, it examines the full range of key topics in contemporary human movement studies, explaining motor behaviour in depth from the molecular level to behavioural consequences. The book contains contributions from many of the world's leading experts in motor control and motor learning, and is composed of five thematic parts: Theories and models Basic aspects of motor control and learning Motor control and learning in locomotion and posture Motor control and learning in voluntary actions Challenges in motor control and learning Mastering and improving motor control may be important in sports, but it becomes even more relevant in rehabilitation and clinical settings, where the prime aim is to regain motor function. Therefore the book addresses not only basic and theoretical aspects of motor control and learning but also applied areas like robotics, modelling and complex human movements. This book is both a definitive subject guide and an important contribution to the contemporary research agenda. It is therefore important reading for students, scholars and researchers working in sports and exercise science, kinesiology,

physical therapy, medicine and neuroscience.

 Covering basic theory, components, installation, maintenance, manufacturing, regulation and industry developments, *Gas Turbines: A Handbook of Air, Sea and Land Applications* is a broad-based introductory reference designed to give you the knowledge needed to succeed in the gas turbine industry, land, sea and air applications. Providing the big picture view that other detailed, data-focused resources lack, this book has a strong focus on the information needed to effectively decision-make and plan gas turbine system use for particular applications, taking into consideration not only operational requirements but long-term life-cycle costs in upkeep, repair and future use. With concise, easily digestible overviews of all important theoretical bases and a practical focus throughout, *Gas Turbines* is an ideal handbook for those new to the field or in the early stages of their career, as well as more experienced engineers looking for a reliable, one-stop reference that covers the breadth of the field. Covers installation, maintenance, manufacturer's specifications, performance criteria and future trends, offering a rounded view of the area that takes in technical detail as well as industry economics and outlook Updated with the latest industry developments, including new emission and efficiency regulations and their impact on gas turbine technology Over 300 pages of new/revised content, including new sections on microturbines, non-conventional fuel sources for microturbines, emissions, major developments in aircraft engines, use of coal gas and superheated steam, and new case histories throughout highlighting component improvements in all systems and sub-systems.

 Seeing is Understanding. The first VISUAL guide to marine diesel

systems on recreational boats. Step-by-step instructions in clear, simple drawings explain how to maintain, winterize and recommission all parts of the system - fuel deck fill - engine - batteries - transmission - stern gland - propeller. Book one of a new series. Canadian author is a sailor and marine mechanic cruising aboard his 36-foot steel-hulled Chevrier sloop.
 Illustrations: 300+ drawings Pages: 222 pages Published: 2017
 Format: softcover Category: Inboards, Gas & Diesel
Boating Elsevier
 Vols. for 1921-22, 1924-63 include an annual review number with title: Fishing gazette annual review and classified directory of marine and shore plant equipment (1921-60, Fishing gazette annual review number (varies slightly))
Environmental Impact Statement
 This book is strongly recommended to those engaged in activities involving the lubrication of machines, to lubricant manufacturers and to raw material producers. It brings together the experience of many companies, institutions and individual users in a variety of European countries. These user groups have monitored the effect of applying biolubricants to their equipment. Lubrication in Inland and Coastal Water Activities describes the various products available and gives an overview of the technical and environmental aspects of biolubricants. Attention is given to the range of biolubricants, their application and the importance of including all stakeholders in developing their use: from the lubricant manufacturers to the equipment manufacturers, from local users to governmental authorities. Lubrication in Inland and Coastal Water Activities is a valuable contribution towards the development of a responsible lubricant policy.
